

Luvora (DreamAI) Pitch Deck

Next-Generation Uncensored AI Companion Studio & Monetization Platform

Executive Summary: Luvora is an advanced, privacy-first multi-modal AI companion platform. It enables users to create, customize, and converse with high-context AI characters via uncensored text chat, real-time ElevenLabs voice synthesis, and WaveSpeed AI image generation. Built with instant non-custodial crypto wallet derivation (Solana, Tron USDT, Base USDC) and CryptoGate payment automation, Luvora combines premium consumer AI experiences with scalable Web3 revenue infrastructure.

1. Core Product Features

Feature & Capability	Status & Implementation Highlights
Uncensored LLM Chat Engine	[LIVE IN PROD] Dual AI backend supporting Groq (Qwen 3.6 27B / Llama 3.3 70B) & Google Gemini 2.5 Flash Lite. Built-in sliding window context management and Redis session caching.
ElevenLabs Realtime Voice Synthesis	[LIVE IN PROD] Integrated ElevenLabs high-fidelity text-to-speech engine (`oyOgbRLsneo58YVku7Di` & custom character voice IDs) powering live audio calls and chat voice notes.
WaveSpeed & Cloudinary Multi-Modal AI	[LIVE IN PROD] AI Image Generation using WaveSpeed (`wavespeed-ai/chroma`) and Cloudinary tag-based asset searching for character avatars and visual roleplay.
Non-Custodial Multi-Chain Wallet Derivation	[LIVE IN PROD] Dynamic HD seed path derivation generating user-specific payment addresses across Solana (SOL), Tron (USDT TRC-20 via `tronXpub`), and Base (USDC ERC-20 via `baseXpub`).
Token Guard & Rate Limiting Engine	[LIVE IN PROD] Strict coin deduction logic (1 coin / text message, 10 coins / image generation) with daily call quotas (150 calls free / 2,000 calls VIP).

2. Monetization & Revenue Endpoints Architecture

Luvora operates a hybrid revenue model combining recurring VIP subscriptions, micro-transaction coin top-ups, and developer/creator revenue sharing.

Plan / Product	Pricing	Value Proposition & Quotas	Status
VIP Monthly	\$8.00 / mo	Unlimited coin balance (99,999 coins), 2,000 daily messages, priority voice synthesis.	[LIVE IN PROD]
VIP Quarterly	\$20.00 / 90 days	Save 16.6% compared to monthly. Full VIP access.	[LIVE IN PROD]
VIP Yearly	\$60.00 / year	Save 37.5%. Best value annual access.	[LIVE IN PROD]
Coin Pack Top-Ups	\$2.99 - \$19.99	Micro-transactions for pay-as-you-go non-subscribers.	[LIVE IN PROD]

Creator Revenue Share	30% Rev Share	Character creators earn 30% of coin usage on their public characters.	[IN BUILD / ROADMAP]
B2B API Licensing	Usage-based API	Third-party developers pay to access Luvora's uncensored companion endpoint.	[IN BUILD / ROADMAP]

Backend Payment Endpoint Technical Specifications:

Endpoint Route & Method	Function & Security Protocol	Status
POST /api/payments/crypto/addresses	Derives personal HD addresses for SOL, TRON (USDT), and Base (USDC) per user UUID.	[LIVE IN PROD]
POST /api/payments/solana/confirm	Verifies on-chain Solana signatures, checks 5% slippage buffer, prevents double-spends, and updates VIP status.	[LIVE IN PROD]
POST /api/payments/crypto/confirm	Queries TronGrid API (TRC-20 USDT) and Base RPC JsonRpcProvider (ERC-20 USDC) to confirm transfer fulfillment.	[LIVE IN PROD]
POST /api/payments/cryptogate/create	Generates automated CryptoGate payment invoice for Litecoin (LTC) with formatted metadata user_id kind plan.	[LIVE IN PROD]
POST /api/webhooks/crypto	HMAC SHA256 signature verification, 1% amount tolerance check, and instant automatic subscription fulfillment.	[LIVE IN PROD]
POST /api/payments/creator/payout	Automated payout distribution endpoint to send accumulated crypto revenue to character creators.	[IN BUILD / ROADMAP]
POST /api/v1/developer/keys	Developer portal API key generation & usage-based metering endpoint.	[IN BUILD / ROADMAP]

3. Technical Stack & Infrastructure Highlights

- **High Performance Node.js Core:** Express/Node ES Module backend running on Railway/Docker with native CORS reflection and undici IPv4 first routing.
- **Sub-50ms Caching:** ioredis cache layer with automated database fallback for ultra-fast chat session retrieval.
- **Supabase PostgreSQL:** Secure database architecture with Row Level Security (RLS) and Service Role isolation.
- **Automated Deployment:** Multi-stage production Dockerfile and GitHub Actions CI/CD workflow pushing directly to Netlify & Railway.

Summary & Investment Highlights: Luvora combines a validated consumer AI product (uncensored character chat & voice calls) with a frictionless crypto-native monetization engine. With live multi-chain payment endpoints, active automated webhooks, and upcoming creator revenue splits, Luvora is positioned for rapid Web3 user adoption and immediate cash flow generation.
